The Honorable Jon Tester  
Chair  
Senate Appropriations Subcommittee on  
Defense  
Room S-128, The Capitol  
Washington, D.C. 20515

The Honorable Susan Collins  
Ranking Member  
Senate Appropriations Subcommittee on  
Defense  
Room S-128, The Capitol  
Washington, D.C. 20515

To Chairman Tester and Ranking Member Collins:

As you work to complete the FY25 Defense Appropriations bill, the undersigned organizations respectfully urge you to include \$20 million to create a Colorectal Cancer Research Program within the Department of Defense Congressionally Directed Medical Research Program. Our organizations represent thousands of colorectal cancer survivors and their loved ones, physicians and researchers committed to reducing the burden of this disease.

As the second leading cause of cancer death for men and women combined, the leading cause of cancer death for men under 50 and the second leading cause of cancer death for women under 50, it is clear that more resources must be dedicated to colorectal cancer research.<sup>1</sup>

Incidence rates have been increasing among individuals under 50 years of age - a key demographic for our active and reserve duty military personnel whose average age is 29.6 years – at an alarming rate.<sup>2</sup> Individuals born in the 1990s have double the risk of colon cancer and quadruple the risk of rectal cancer as those born in the 1950s.<sup>3</sup> Additionally, three of four colorectal cancer patients under the age of 50 have no family history of the disease, and over 60 percent are diagnosed at a late stage when the disease is far more difficult to treat.<sup>4</sup> In those later stages, it becomes more expensive for patients and becomes an overwhelming financial burden on those patients and their families.

Over 13,000 active-duty service members were diagnosed with colorectal cancer between 2001 and 2021, with the highest rates being seen in the Army, followed by Air Force, Navy and Marine Corps. Several substances frequently used in military operations have been linked to increased risk of colorectal cancer including hexavalent chromium, asbestos, petrochemicals, and benzo(a)pyrene.<sup>5</sup> This represents a readiness issue for our Armed Forces. We owe it to our active-duty and veteran servicemembers to invest in finding solutions.

We are grateful that colorectal cancer has been eligible for funding through the Peer-Reviewed Research Program (PRCRP) since FY 2010. The PRCRP has supported research exploring issues important to both the warfighter and the civilian population, including whether

environmental chemicals are associated with an increased risk of colorectal cancer and looking at ways to develop a colorectal cancer vaccine.

But we are leaving good science on the table. In FY2022, the DoD received 66 colorectal cancer applications. Of those, 25 were deemed “meritorious,” but only nine applications were funded. Those projects could be the key to more effective treatment options or uncovering why more young people are being diagnosed with colorectal cancer.

We understand that this is a challenging budget environment, but the cost of doing nothing is far greater. In 2020, the United States spent an estimated \$24.3 billion on colorectal cancer care.<sup>6</sup> Investment in colorectal cancer research is critical to change the trajectory of this disease. As you draft the FY25 Defense Appropriations bill, we urge you to provide \$20 million to create a Colorectal Cancer Research Program within the Department of Defense Congressionally Directed Medical Research Program.

Thank you for your consideration and we look forward to working with you on this important matter.

Sincerely,
